

SoundAround™

EXTERNAL SOUND
ACQUISITION FOR CARS

Look, no external microphones!

Principle:

Using vibration sensors attached to car windows inside a car for external sounds acquisition.

Alango DSP software technology (patent pending):

High sensitivity to external sounds, low sensitivity to internal sounds.

Applications:

Autonomous and assisted driving, dash cams, black boxes.

Enabling:

Siren detection, windows acoustic transparency, outside vehicle voice control, sounds of vehicle damage or theft.

Advantages:

Cost & Reliability: No external microphones and wiring.
Installation: easy installation for OEM and aftermarket.

Available on a variety of DSP/MCU cores.
